

Vouza Admin Agent

Your AI office assistant — running on your computer,
controlled from your phone, working 24/7.

Email · Calendar · WhatsApp · Telegram · Voice · Files · Web

What is Admin Agent?

Admin Agent is an AI-powered office assistant that lives on your computer and works for you around the clock. It handles emails, schedules meetings, drafts replies, processes invoices, sends reports, and replies on WhatsApp — all while you focus on the work that matters.

The Problem

Small business owners spend 3-5 hours every day on routine admin: sorting emails, scheduling meetings, sending follow-ups, processing expenses. This time should be spent on growing the business.

The Solution

A personal AI employee that connects to your existing tools (Gmail, Calendar, WhatsApp) and handles routine tasks automatically — controlled by simple chat messages from your phone.

5 min

SETUP TIME

24/7

ALWAYS ON

\$0

PER MESSAGE

100%

YOUR DATA, YOUR PC

Unlike cloud-based assistants, Admin Agent runs entirely on your own computer.
Your emails, contacts, and data never leave your device unless you say so.

Who it's for

Anyone who runs a business and is buried in routine office work.

Solo founders

Save 15+ hours a week on admin. Focus on building the product, not chasing email threads and scheduling meetings.

Small business owners

Run your shop, restaurant, clinic or studio without drowning in invoices, appointment booking, or customer messages.

Pastors & non-profits

Manage congregation communication, weekly newsletters, event scheduling and prayer requests — without hiring an assistant.

Consultants

Triage client emails, prepare meeting briefs, send weekly status reports — across all your client engagements automatically.

Remote teams

Centralize team admin: leave requests, expense reports, weekly summaries. Everyone reaches the same AI through the channel they prefer.

Family offices

Coordinate household admin, vendor payments, calendar conflicts, and personal correspondence — privately and on your own infrastructure.

The common thread

You're spending too much time on tasks that **follow a pattern**. Admin Agent learns those patterns and handles them — while you stay in control through chat.

What it can do

Eight categories of capabilities — all delivered through natural conversation.

Email

Read, sort, draft replies, schedule sends

Calendar

Book meetings, resolve conflicts, send invites

WhatsApp

Reply on your behalf, route urgent messages

Telegram

Voice messages transcribed and acted on

Reports

Daily briefings, weekly summaries, KPI rollups

Invoices

Extract amounts, categorize, file to accounting

Files

Search, organize, extract text from documents

Web research

Look things up, summarize articles, fact-check

Plus 16 built-in skills, ready out of the box

Your journey, end to end

From "never heard of it" to "couldn't live without it" — typically inside one week.

DAY 0 · 5 MINUTES

Install & first launch

Download, run the installer, and open the dashboard at localhost:3456. Three install options: Docker, Windows one-click, or terminal.

DAY 0 · 10 MINUTES

Setup wizard

Pick your AI provider (OpenAI, Anthropic, Google, OpenRouter), paste one key, and name your agent. The wizard handles everything else — no config files to edit.

DAY 1 · 15 MINUTES

Connect your channels

Connect Telegram (1 minute via @BotFather), WhatsApp (scan a QR code), Gmail (paste an App Password), Calendar (drop a service account JSON). Each connection is tested live before saving.

DAY 1-2

First real conversations

Message your agent from your phone: "Summarize my unread emails", "Schedule a coffee with John next Tuesday", "Reply to Sarah that I'll send the proposal by Friday". Agent responds, takes action, confirms what it did.

WEEK 1

Daily rhythm settles in

Morning briefing arrives automatically. Routine emails get triaged. Meeting requests get scheduled. You start asking for more: weekly reports, invoice processing, follow-up chains.

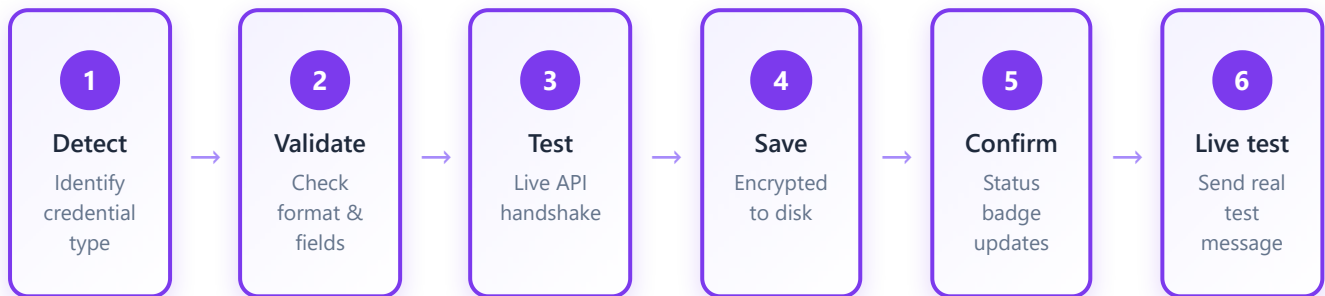

MONTH 1+

Customize and scale

Add custom skills for your specific workflow (e.g., a sales-pipeline summary every Friday). Train the agent on your tone and preferences. It becomes part of how you work.

How setup actually works

When you connect an integration, Admin Agent runs a six-step pipeline that validates everything before it's saved. No more "saved but doesn't work" frustration.

Self-healing

If a step fails, the agent silently tries fallback methods before showing you any error. You only see what you actually need to fix.

Specific errors

If something truly fails, you get exact guidance: "Your Gmail App Password was rejected — generate a new one at this link." No generic "saving failed" messages.

Visible to you in real time

Each step shows ✓ or ✗ as it runs, with timing in milliseconds. You always know what's happening and where things stand. No more black-box "configuring..." waits.

How you talk to it

Whatever messaging app you already use — that's where you control the agent. No new apps to install on your phone.

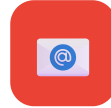

WhatsApp

Native QR pairing.
Free, no Twilio.

Telegram

Bot via @BotFather.
Voice messages too.

Email

Gmail, AgentMail
dedicated inbox.

Direct chat at
localhost:3456

Daily interaction patterns

Morning briefing

"Good morning! You have 12 new emails (3 urgent), 2 meetings today, and a proposal due Friday. Here's a 3-sentence summary of each urgent email..."

Quick task

Voice note while driving: *"Reply to David that the meeting moved to 4pm"* → Agent transcribes, drafts, sends, confirms.

Weekly rollup

Every Friday at 5pm: "Here's your week. 47 emails handled, 8 meetings, 12 invoices processed. Top customer interactions: ..."

Smart alerts

Only the things that need your attention. Routine stuff gets handled silently. You're notified for decisions only.

Smarter than typical chatbots

Four design choices make Admin Agent feel like a thoughtful assistant rather than a brittle script.

Multi-AI engine

Use any of 100+ AI models. Claude, GPT-4o, Gemini, DeepSeek — and switch transparently. If one provider has an outage, the agent automatically uses a backup.

Self-healing

Recovers from failures silently. If an action fails, the agent tries again with different methods before telling you. You only see real problems, not noise.

Context-aware

Remembers context across conversations. Each channel (WhatsApp, Telegram, Email) keeps its own conversation thread, so the agent knows who it's talking to and what about.

Cost-controlled

Built-in spending guards. Daily budget caps prevent runaway API costs. You see exactly what's been spent and on what.

Live health dashboard

A dedicated panel shows you, at any moment:

Every integration's status

Green / amber / red badges with last successful action timestamp

Response speed (P50 / P95 latency)

Know exactly how fast each integration responds in the last hour

Retry counts and failure patterns

See where the agent is having to work harder than usual

Daily API spend per provider

Track costs in real time, with breakdown by AI model

Under the hood (simplified)

Five clean layers — each does one job and hands off to the next.

1

You — through any channel

WhatsApp, Telegram, Email, Voice note, or Web dashboard. All speak to the same brain.

2

Channel Listeners

Receive your message, transcribe voice if needed, identify which conversation thread it belongs to. Filter out spam and unauthorized senders.

3

Agent Brain

Understands your intent. Decides which tools to use. Plans multi-step actions. Recovers from failures. Manages costs.

4

Tools & Skills

27+ built-in tools (email, calendar, files, web search, voice). 16 ready-made skills. Connect external services via MCP for unlimited expansion.

5

Your Data — local only

Config, conversations, credentials, audit logs — all stored on your machine. Survives restarts. Never sent to external servers (except to your chosen AI provider for the active question).

Built for trust

Your business data is sensitive. Admin Agent is engineered with security as a first-class priority — not an afterthought.

- ✓ **Loopback-only by default**
Dashboard is reachable only from your own computer. Cannot be accessed from your network or the internet unless you explicitly enable it (with password).
- ✓ **Secrets never logged**
12 patterns of API keys and passwords are automatically redacted from any logs or memory before being stored.
- ✓ **WhatsApp allowlist (deny by default)**
Only your own number can interact with the agent on WhatsApp. Add others explicitly. Friends messaging you won't get auto-responses.
- ✓ **Sandboxed file operations**
The agent can only read/write files in a designated workspace folder. It cannot access your system files or other users' documents.
- ✓ **PDPA-compliant audit log**
Every conversation is logged in a privacy-compliant format. Export your data, delete on request — full data sovereignty.
- ✓ **Open source, transparent code**
All 22,000+ lines of code are auditable. 319 automated tests verify every behavior. Independent security review encouraged.
- ✓ **Zero known vulnerabilities**
All dependencies regularly audited (latest: 28 May 2026, all clean). No known security flaws in shipped versions.

Where we're going

Admin Agent ships today with a complete foundation. More products are coming — built on the same proven core.

✓ AVAILABLE NOW

Admin Agent v2

- ▶ Multi-AI provider support
- ▶ WhatsApp + Telegram + Email + Voice
- ▶ Self-healing setup pipeline
- ▶ Live observability dashboard
- ▶ 16 built-in business skills
- ▶ Custom skills via Markdown
- ▶ Local-first, your data stays private

🕒 Q3 2026

Sales Agent

- ▶ Lead qualification automation
- ▶ Pipeline tracking via CRM sync
- ▶ Outbound sequence drafting
- ▶ Meeting prep briefs
- ▶ Deal-stage transition coaching
- ▶ Inherits all Admin Agent foundation

🌟 Q4 2026+

HR Agent & beyond

- ▶ HR Agent: hiring, onboarding, leave
- ▶ Finance Agent: bookkeeping support
- ▶ Customer Support Agent
- ▶ Industry verticals (clinics, churches)
- ▶ Multi-agent collaboration
- ▶ Voice-first interaction mode

💛 Built on the same foundation

Every Vouza agent shares the same secure runtime, the same self-healing setup, the same observability dashboard. Once you're set up with one, adding the next is a few clicks. Your team uses one familiar interface for everything.
